released the Visual LISP (VLS) extension to their Visual LISP extension, which is a variant of the Visual LISP language. AutoLISP (AutoLISP) is an extension of the LISP programming language that is used to create AutoCAD extensions. It was originally written by Russ Rojek, a U.S. Navy veteran who developed a number of AutoCAD extensions including the Deco feature. AutoLISP extensions, such as Deco, can be integrated directly into AutoCAD by using the LOAD command. One of AutoLISP's first major releases was AutoLISP 2.5, a major revision of the language, which included a number of features and some performance enhancements. The VBA (Visual Basic for Applications) extension was first made available in AutoCAD version 2011 for Windows. A similar extension called ObjectARX was also made available. The customer is required to purchase a licence for AutoLISP (AutoLISP) and Visual LISP (VLS). AutoLISP and VLS are included in the AutoCAD 2011, 2012 and 2013 licences. AutoLISP and VLS may be licensed as a standalone product.
