Screen space modeling, that enables users to design in 3D without the need to create 2D drawings, is introduced in AutoCAD 2007. AutoCAD's digital drafting and schematic functionality is integrated in the program with the Autocad application suite, AutoCAD allows the user to plan, document and design. Alongside this a variety of technical tools are built into the application such as parametric modeling, 3D, using the DGN (drafting global network) format, and direct conversion to PDF, HTML or DWG, and 3D PDF and DWG files. In 2009 Autodesk released new Application Suite, which contains, AutoCAD Civil 3D, AutoCAD Architecture, AutoCAD Electrical, etc. Overview of 2011 release In 2011, the most significant new features in AutoCAD 2011 release, including better performance, support for new objects and

capabilities. The ribbon interface, which includes faster commands and unified objects and layers, was completely redesigned. The ribbon is split into two sections, Top and Bottom. The top is commonly used, and features the most commonly used menu commands. The Bottom has new menus, tools and commands, including customization options. The ribbon commands are customizable, using context sensitive icons, to fit the way the user works. With the introduction of these new features, AutoCAD "adapts to users' tasks and use styles." "Some things in AutoCAD have not changed, such as the ability to turn off or hide the ribbon in the ribbon menus, and the ability to use classic drawing tools in 2D." In AutoCAD 2012, AutoCAD has a new extensibility system. Through it users can add functionality to the software. An example of this is the ability to create custom shortcuts and in the drawing canvas. Editing tools Shape tools The Shape tools help shape the drawing area into different geometric shapes by applying each tool to it. The Shape tool set is composed of four shape tools: AutoShape, Freeform, Fit and Polygon. Some of the most common types of shape that can be created using the shape tools are: Lines: These are straight lines that can be perfectly vertical or horizontal. Circles: These are circles of any size. Rectangles: These are squares of any size. Ellipses: These are imperfect, slightly round, circles, such as used to represent an eye. Diamonds:

The Roman era, when the city first took shape, has almost completely disappeared. All you see today is the massive construction that was built by the Emperors at the end of the 4th century A.D. There were many other buildings and structures that existed in the past and that have been lost forever, but we only have a scant description to go by. 3 B. Originally, the city was built much lower. The earliest recorded building is part of a fort that was built by Pompey during the 70s BC. There is a path, called the Via Clodia, that goes past the spot where the temple of Apollo once stood. The path of the through the forum is today called the Vicolo del Foro. It is a very straight street, over 6,000 feet long, that goes through the heart of the city from the Janiculum to the Aventine. 4 C. When the settlement of Roma first took shape, the position of the city was not much higher than where it stands today, in a valley surrounded by very high hills. The area where the modern church of Santa Maria Maggiore and the Sant'Angelo and the Aventino hill's still stands. 5 The impressive view that most visitors have of the city today was not always the case. At the end of the 19th century, the large fountain in the middle of the Piazza Barberini was moved so it would stand where the church of Santa Maria
