To get started, your biggest requirement is a computer with a hard drive capable of holding all the digital images you want to store. You also need to have a place to store all your photos. The next two sections take you through the steps to set up a folder hierarchy for storing all your photos. When you store your photos, make sure that the folder name includes the date and time you store the photo. This is a best practice and not strictly necessary, but it's in the spirit of keeping things organized.
